## Unit 1, Lesson 14: Alternate Interior Angles

Let's explore why some angles are always equal.

### 14.1: Angle Pairs

1. Find the measure of angle  $JGH$ . Explain or show your reasoning.

2. Find and label a second  $30^\circ$  degree angle in the diagram. Find and label an angle congruent to angle  $JGH$ .

### 14.2: Cutting Parallel Lines with a Transversal

Lines  $AC$  and  $DF$  are parallel. They are cut by transversal  $HJ$ .

1. With your partner, find the seven unknown angle measures in the diagram. Explain your reasoning.

2. What do you notice about the angles with vertex  $B$  and the angles with vertex  $E$ ?

NAME \_\_\_\_\_

3. Using what you noticed, find the measures of the four angles at point  $B$  in the second diagram. Lines  $AC$  and  $DF$  are parallel.

NAME \_\_\_\_\_

DATE \_\_\_\_\_

PERIOD \_\_\_\_\_

4. The next diagram resembles the first one, but the lines form slightly different angles. Work with your partner to find the six unknown angles with vertices at points  $B$  and  $E$ .

5. What do you notice about the angles in this diagram as compared to the earlier diagram? How are the two diagrams different? How are they the same?

**Are you ready for more?**

Parallel lines  $l$  and  $m$  are cut by two transversals which intersect  $l$  in the same point. Two angles are marked in the figure. Find the measure  $x$  of the third angle.

**14.3: Alternate Interior Angles Are Congruent**

1. Lines  $l$  and  $k$  are parallel and  $t$  is a transversal. Point  $M$  is the midpoint of segment  $PQ$ .

Find a rigid transformation showing that angles  $MPA$  and  $MQB$  are congruent.

NAME \_\_\_\_\_

PERIOD \_\_\_\_\_

2. In this picture, lines  $\ell$  and  $k$  are no longer parallel.  $M$  is still the midpoint of segment  $PQ$ .

Does your argument in the earlier problem apply in this situation? Explain.

### Lesson 14 Summary

When two lines intersect, vertical angles are equal and adjacent angles are supplementary, that is, their measures sum to  $180^\circ$ . For example, in this figure angles 1 and 3 are equal, angles 2 and 4 are equal, angles 1 and 4 are supplementary, and angles 2 and 3 are supplementary.

NAME \_\_\_\_\_

PERIOD \_\_\_\_\_

When two parallel lines are cut by another line, called a **transversal**, two pairs of **alternate interior angles** are created. (“Interior” means on the inside, or between, the two parallel lines.) For example, in this figure angles 3 and 5 are alternate interior angles and angles 4 and 6 are also alternate interior angles.

Alternate interior angles are equal because a  $180^\circ$  rotation around the midpoint of the segment that joins their vertices takes each angle to the other. Imagine a point  $M$  halfway between the two intersections—can you see how rotating  $180^\circ$  about  $M$  takes angle 3 to angle 5?

Using what we know about vertical angles, adjacent angles, and alternate interior angles, we can find the measures of any of the eight angles created by a transversal if we know just one of them. For example, starting with the fact that angle 1 is  $70^\circ$  we use vertical angles to see that angle 3 is  $70^\circ$ , then we use alternate interior angles to see that angle 5 is  $70^\circ$ , then we use the fact that angle 5 is supplementary to angle 8 to see that angle 8 is  $110^\circ$  since  $180 - 70 = 110$ . It turns out that there are only two different measures. In this example, angles 1, 3, 5, and 7 measure  $70^\circ$ , and angles 2, 4, 6, and 8 measure  $110^\circ$ .

### Lesson 14 Glossary Terms

- alternate interior angles
- transversal

# Unit 1, Lesson 14: Alternate Interior Angles

1. Use the diagram to find the measures of each angle. Explain your reasoning.

- a.  $m\angle ABC$
- b.  $m\angle EBD$
- c.  $m\angle ABE$

(from Unit 1, Lesson 9)

2. Lines  $k$  and  $\ell$  are parallel, and the measure of angle  $ABC$  is 19 degrees.

- a. Explain why the measure of angle  $ECF$  is 19 degrees. If you get stuck, consider translating line  $\ell$  by moving  $B$  to  $C$ .
- b. What is the measure of angle  $BCD$ ? Explain.

3. The diagram shows three lines with some marked angle measures.

Find the missing angle measures marked with question marks.

4. The two figures are scaled copies of each other.

- What are some ways that you can tell they are scaled copies?
- What is the scale factor that takes Figure 1 to Figure 2?
- What is the scale factor that takes Figure 2 to Figure 1?
