Unit 5, Lesson 12: How Much Will Fit?

Let's reason about the volume of different shapes.

12.1: Two Containers

Your teacher will show you some containers. The small container holds 200 beans. Estimate how many beans the large jar holds.

12.2: What's Your Estimate?

Your teacher will show you some containers.

1. If the pasta box holds 8 cups of rice, how much rice would you need for the other rectangular prisms?

2. If the pumpkin can holds 15 fluid ounces of rice, how much do the other cylinders hold?

3. If the small cone holds 2 fluid ounces of rice, how much does the large cone hold?

4. If the golf ball were hollow, it would hold about 0.2 cups of water. If the baseball were hollow, how much would the sphere hold?

NAME   DATE   PERIOD

12.3: Do You Know These Figures?

1. What shapes are the faces of each type of object shown here? For example, all six faces of a cube are squares.
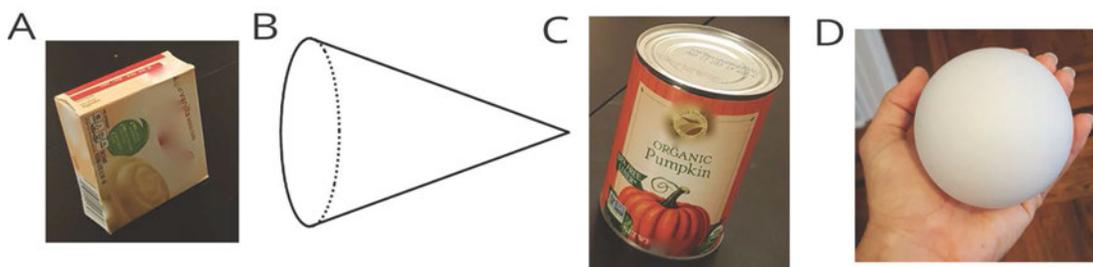

2. Which faces could be referred to as a "base" of the object?

3. Here is a method for quickly sketching a cylinder:
   - Draw two ovals.

   - Connect the edges.

   - Which parts of your drawing would be hidden behind the cylinder? Make these parts dashed lines.
   Practice sketching some cylinders. Sketch a few different sizes, including short, tall, narrow, wide, and sideways. Label the radius r and height h on each cylinder.

Are you ready for more?

A soccer ball is a polyhedron with 12 black pentagonal faces and 20 white hexagonal faces. How many edges in total are on this polyhedron?

Lesson 12 Summary

The volume of a three-dimensional figure, like a jar or a room, is the amount of space the shape encloses. We can measure volume by finding the number of equal-sized volume units that fill the figure without gaps or overlaps. For example, we might say that a room has a volume of 1,000 cubic feet, or that a pitcher can carry 5 gallons of water. We could even measure volume of a jar by the number of beans it could hold, though a bean count is not really a measure of the volume in the same way that a cubic centimeter is because there is space between the beans. (The number of beans that fit in the jar do depend on the volume of the jar, so it is an okay estimate when judging the relative sixes of containers.)

In earlier grades, we studied three-dimensional figures with flat faces that are polygons. We learned how to calculate the volumes of rectangular prisms. Now we will study three-dimensional figures with circular faces and curved surfaces: cones, cylinders, and spheres.
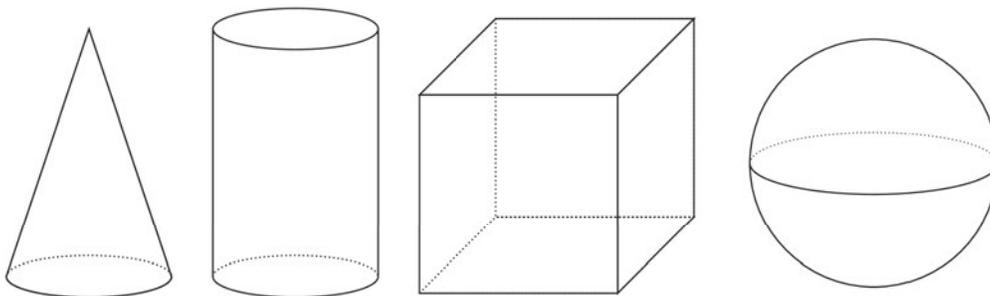

To help us see the shapes better, we can use dotted lines to represent parts that we wouldn't be able to see if a solid physical object were in front of us. For example, if we think of the cylinder in this picture as representing a tin can, the dotted arc in the bottom half of that cylinder represents the back half of the circular base of the can. What objects could the other figures in the picture represent?

NAME   DATE   PERIOD

Unit 5, Lesson 12: How Much Will Fit?

1. a. Sketch a cube and label its side length as 4 cm (this will be Cube A).

    b. Sketch a cube with sides that are twice as long as Cube A and label its side length (this will be Cube B).

    c. Find the volumes of Cube A and Cube B.

2. Several glass aquariums of various sizes are for sale at a pet shop. They are all shaped like rectangular prisms. A 15-gallon tank is 24 inches long, 12 inches wide, and 12 inches tall. Match the dimensions of the other tanks with the volume of water they can each hold.

   A. Tank 1: 36 inches long, 18 inches wide, and   1. 5 gallons
      12 inches tall

                                                          2. 10 gallons
   B. Tank 2: 16 inches long, 8 inches wide, and 10
      inches tall   3. 20 gallons

   C. Tank 3: 30 inches long, 12 inches wide, and   4. 30 gallons
      12 inches tall

   D. Tank 4: 20 inches long, 10 inches wide, and
      12 inches tall

3. Two paper drink cups are shaped like cones. The small cone can hold 6 oz of water. The large cone is $\frac{4}{3}$ the height and $\frac{4}{3}$ the diameter of the small cone. Which of these could be the amount of water the large cone holds?

   A. 8 cm
   B. 14 oz
   C. 4.5 oz
   D. 14 cm

4. The graph represents the volume of a cylinder with a height equal to its radius.

NAME   DATE   PERIOD

a. When the diameter is 2, what is the radius of the cylinder?

b. Express the volume of a cube of side length s as an equation.

c. Make a table for volume of the cube at $s = 0$, $s = 1$, $s = 2$, and $s = 3$.

d. Which volume is greater: the volume of the cube when $s = 3$, or the volume of the cylinder when its diameter is 3?
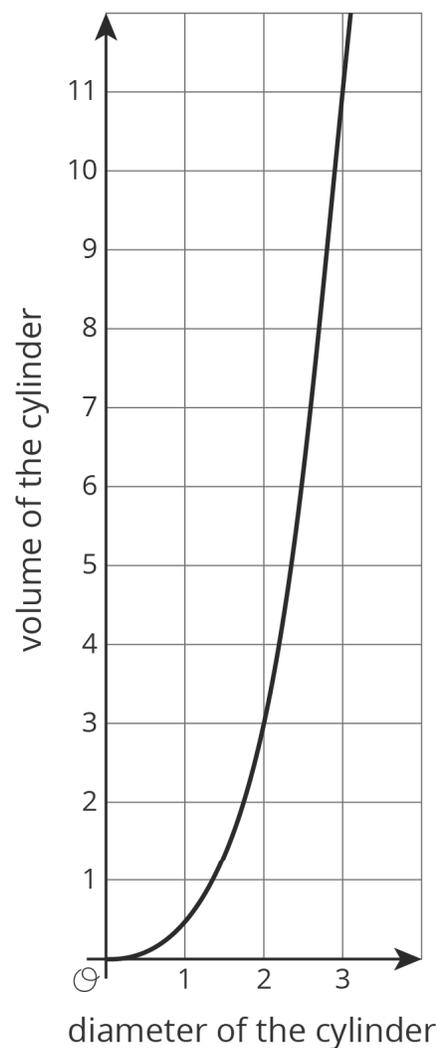

(from Unit 5, Lesson 7)

5. Select **all** the points that are on a line with slope 2 that also contains the point $(2, -1)$.

A. $(3, 1)$
B. $(1, 1)$
C. $(1, -3)$
D. $(4, 0)$
E. $(6, 7)$

(from Unit 3, Lesson 10)

6. Solve: $\begin{cases} y = \text{-}2x - 20 \\ y = x + 4 \end{cases}$

(from Unit 4, Lesson 14)
