

Lesson 16

Objective: Apply knowledge of area to determine areas of rooms in a given floor plan.

Suggested Lesson Structure

■ Fluency Practice	(15 minutes)
■ Concept Development	(35 minutes)
■ Student Debrief	(10 minutes)
Total Time	(60 minutes)

Fluency Practice (15 minutes)

- Group Counting **3.OA.1** (3 minutes)
- Multiply by 9 **3.OA.7** (7 minutes)
- Find the Area **3.MD.7** (5 minutes)

Group Counting (3 minutes)

Note: Group counting reviews interpreting multiplication as repeated addition.

Direct students to count forward and backward, occasionally changing the direction of the count.

- Sixes to 60
- Sevens to 70
- Eights to 80

Multiply By 9 (7 minutes)

Materials: (S) Multiply By 9 Pattern Sheet (6–10)

Note: This activity builds fluency with multiplication facts using units of nine. It works toward students knowing from memory all products of two one-digit numbers. See G3–M4–Lesson 2 for the directions for administration of a *Multiply By* pattern sheet.

T: (Write $6 \times 9 = \underline{\quad}$.) Let's skip-count up by nine to solve. (Count with fingers to 6 as students count.)

S: 9, 18, 27, 36, 45, 54.

T: Let's skip-count down to find the answer, too. Start at 90. (Count down with fingers as students count.)

S: 90, 81, 72, 63, 54.

T: Let’s skip-count up again to find the answer, but this time start at 45. (Count up with fingers as students count.)

S: 45, 54.

Continue with the following possible sequence: 8×9 , 7×9 , and 9×9 .

T: (Distribute Multiply By 9 pattern sheet.) Let’s practice multiplying by 9. Be sure to work left to right across the page.

Find the Area (5 minutes)

Materials: (S) Personal white boards

Note: This fluency reviews G3–M4–Lesson 14.

T: (Project the first figure on the right.) Find the areas of the large rectangle and the unshaded rectangle. Then subtract to find the area of the shaded region. (Write *Area = ___ square inches.*)

S: (Students work and write *Area = 27 square inches.*)

Continue with other figures.

Concept Development (35 minutes)

Materials: (S) G3–M4–Lesson 15 Problem Set, ruler

T: Today you will continue to find the area in square centimeters of each room in the house.

Materials: (S) Optional Problem Set, centimeter grid paper, construction paper, glue

Optional: Create a floor plan with different side lengths for given areas.

If students finish early on the second day, they may work with a partner to create a floor plan with the areas of the rooms that they found. The task is for students to find new side lengths for each room. Students should use their answers from the Problem Set to ensure that they find different side lengths with the same area. After they find new side lengths, they mark each room on centimeter grid paper and then cut the rooms out. They will use these centimeter grids to fit the rooms together to make their floor plan. They will glue their final arrangement of rooms onto a piece of construction paper. Allow students a few minutes to do a gallery walk of the completed floor plans.

Optional: Review strategies to find new side lengths of given areas.

- T: Yesterday you found the areas of the rooms in a floor plan that your clients designed. They like the area of each room, but they want to change the way the rooms look. Your job today is to create rooms with the same areas, but with different side lengths. Are you up for the challenge architects?
- S: Yes!
- T: Look at the Problem Set. What is the area of the hallway?
- S: 24 square centimeters.
- T: What are possible side lengths you can have for the hallway and still have the same area?
- S: 3 and 8. → 1 and 24. → 2 and 12. → 6 and 4.
- T: Talk to a partner: Which of these choices was used in the floor plan?
- S: 8 and 3. → The numbers are just switched.
- T: So when you redesign the floor plan today, be sure you don't use that combination!

Name Gina Date _____

1. Make a prediction, which room looks like it has the biggest area?
I think the living room has the biggest area.

2. Record the areas and show the strategy you used to find each area.

Room	Area	Strategy
Bedroom 1	<u>60</u> sq. cm	$5 \times 12 = 5 \times (10 + 2)$ $= (5 \times 10) + (5 \times 2)$ $= 50 + 10 = 60$
Bedroom 2	<u>56</u> sq. cm	$8 \times 7 = 56$
Kitchen	<u>42</u> sq. cm	$6 \times 7 = 42$
Hallway	<u>24</u> sq. cm	$3 \times 8 = 24$
Bathroom	<u>25</u> sq. cm	$5 \times 5 = 25$
Dining Room	<u>28</u> sq. cm	$4 \times 7 = 28$
Living Room	<u>88</u> sq. cm	$(6 \times 10) + (4 \times 7)$ $= 60 + 28$ $= 88$

Problem Set (25 minutes)

Students should do their personal best to complete the Problem Set within the allotted 25 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Apply knowledge of area to determine areas of rooms in a given floor plan.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be

3. Which room has the biggest area? Was your prediction right? Why or why not?
The living room has the biggest area. Yes, my prediction was right because when you add the areas of the small rectangles in the living room, they add up to more than any other room.

4. Your clients buy 3 boxes of 8 square centimeter tiles. Are there enough tiles to cover the entire bathroom floor? Explain your answer.
 $3 \times 8 = 24$
No there aren't enough tiles for the bathroom floor. The area of the bathroom is 25 sq. cm and the tiles would only be enough for 24 sq. cm.

5. Find the side lengths of the house without using your ruler to measure them and explain the process you used.
 Side lengths: 19 centimeters and 17 centimeters
I added the side lengths of the rooms to find the side lengths of the house, like this:
 $12 + 5 = 17$
 $5 + 6 + 4 + 4 = 19$

6. What is the area of the whole floor plan? How do you know?
 Area = 323 square centimeters
I found the area of the house by adding the areas of the rooms.
 $60 + 56 + 42 + 24 + 25 + 28 + 88 = 323$

addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

You may choose to use any combination of the questions below to lead the discussion.

- Explain to a partner how you found the side lengths of the whole house without using your ruler to measure.
- Can you multiply the side lengths of the house to find the area of the house? Why or why not? How did you find the area of the whole house?
- Do we usually measure rooms in centimeters? What unit might each centimeter in this picture represent on a real house? (Yards, feet, or meters.)

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.

Multiply.

$9 \times 1 = \underline{\quad\quad}$ $9 \times 2 = \underline{\quad\quad}$ $9 \times 3 = \underline{\quad\quad}$ $9 \times 4 = \underline{\quad\quad}$

$9 \times 5 = \underline{\quad\quad}$ $9 \times 6 = \underline{\quad\quad}$ $9 \times 7 = \underline{\quad\quad}$ $9 \times 8 = \underline{\quad\quad}$

$9 \times 9 = \underline{\quad\quad}$ $9 \times 10 = \underline{\quad\quad}$ $9 \times 5 = \underline{\quad\quad}$ $9 \times 6 = \underline{\quad\quad}$

$9 \times 5 = \underline{\quad\quad}$ $9 \times 7 = \underline{\quad\quad}$ $9 \times 5 = \underline{\quad\quad}$ $9 \times 8 = \underline{\quad\quad}$

$9 \times 5 = \underline{\quad\quad}$ $9 \times 9 = \underline{\quad\quad}$ $9 \times 5 = \underline{\quad\quad}$ $9 \times 10 = \underline{\quad\quad}$

$9 \times 6 = \underline{\quad\quad}$ $9 \times 5 = \underline{\quad\quad}$ $9 \times 6 = \underline{\quad\quad}$ $9 \times 7 = \underline{\quad\quad}$

$9 \times 6 = \underline{\quad\quad}$ $9 \times 8 = \underline{\quad\quad}$ $9 \times 6 = \underline{\quad\quad}$ $9 \times 9 = \underline{\quad\quad}$

Name _____

Date _____

Optional: Record the new side lengths you have chosen for each of the rooms and show that these side lengths equal the required area. For non-rectangular rooms, record the side lengths and areas of the small rectangles. Then show how the areas of the small rectangles equal the required area.

Room	New Side Lengths
Bedroom 1: 60 sq cm	
Bedroom 2: 56 sq cm	
Kitchen: 42 sq cm	

Room	New Side Lengths
Hallway: 24 sq cm	
Bathroom: 25 sq cm	
Dining Room: 28 sq cm	
Living Room: 88 sq cm	

Name _____

Date _____

Find the area of the shaded region. Then draw and label a rectangle with the same area.

Name _____

Date _____

Jeremy plans and designs his own dream playground on grid paper. His new playground will cover a total area of 72 square units. The chart shows how much space he gives for each piece of equipment, or area. Use the information in the chart to draw and label a possible way Jeremy can plan his playground.

Basketball Court	10 square units
Jungle Gym	9 square units
Slide	6 square units
Soccer Area	24 square units
