

Add Unlike Fractions

Problem 1:

$$\frac{2}{3} + \frac{1}{6} =$$

Lowest common denominator =

Equivalent fractions with common denominator

$$\frac{2}{3} = \frac{\text{ } \text{ }}{\text{ } \text{ }} / \frac{\text{ } \text{ }}{\text{ } \text{ }}$$

$$\frac{1}{6} = \frac{\text{ } \text{ }}{\text{ } \text{ }} / \frac{\text{ } \text{ }}{\text{ } \text{ }}$$

Add the equivalent fractions

$$\frac{\text{ } \text{ }}{\text{ } \text{ }} / \frac{\text{ } \text{ }}{\text{ } \text{ }}$$

Problem 2:

$$\frac{1}{2} + \frac{2}{3} =$$

Lowest common denominator =

Equivalent fractions with common denominator

$$\frac{1}{2} = \frac{\text{ } \text{ }}{\text{ } \text{ }} / \frac{\text{ } \text{ }}{\text{ } \text{ }}$$

$$\frac{2}{3} = \frac{\text{ } \text{ }}{\text{ } \text{ }} / \frac{\text{ } \text{ }}{\text{ } \text{ }}$$

Add the equivalent fractions and simplify

$$\frac{\text{ } \text{ }}{\text{ } \text{ }} / \frac{\text{ } \text{ }}{\text{ } \text{ }} = \frac{\text{ } \text{ }}{\text{ } \text{ }} \frac{\text{ } \text{ }}{\text{ } \text{ }} / \frac{\text{ } \text{ }}{\text{ } \text{ }}$$

Add Unlike Fractions

Problem 1:

$$\frac{2}{3} + \frac{1}{6} =$$

Lowest common denominator =

Equivalent fractions with common denominator

$$\frac{2}{3} = \frac{4}{6}$$

$$\frac{1}{6} = \frac{1}{6}$$

Add the equivalent fractions

$$\frac{5}{6}$$

Problem 2:

$$\frac{1}{2} + \frac{2}{3} =$$

Lowest common denominator =

Equivalent fractions with common denominator

$$\frac{1}{2} = \frac{3}{6}$$

$$\frac{2}{3} = \frac{4}{6}$$

Add the equivalent fractions and simplify

$$\frac{7}{6} = 1 \frac{1}{6}$$
