

Area Worksheets (Rectangles)

1. Use a straight edge to draw a grid of equal size squares within the rectangle. Find and label the side lengths. Then multiply the side lengths to find the area.

A. Area: $\underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$ square units

B. Area: $\underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$ square units

C. Area: $\underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$ square units

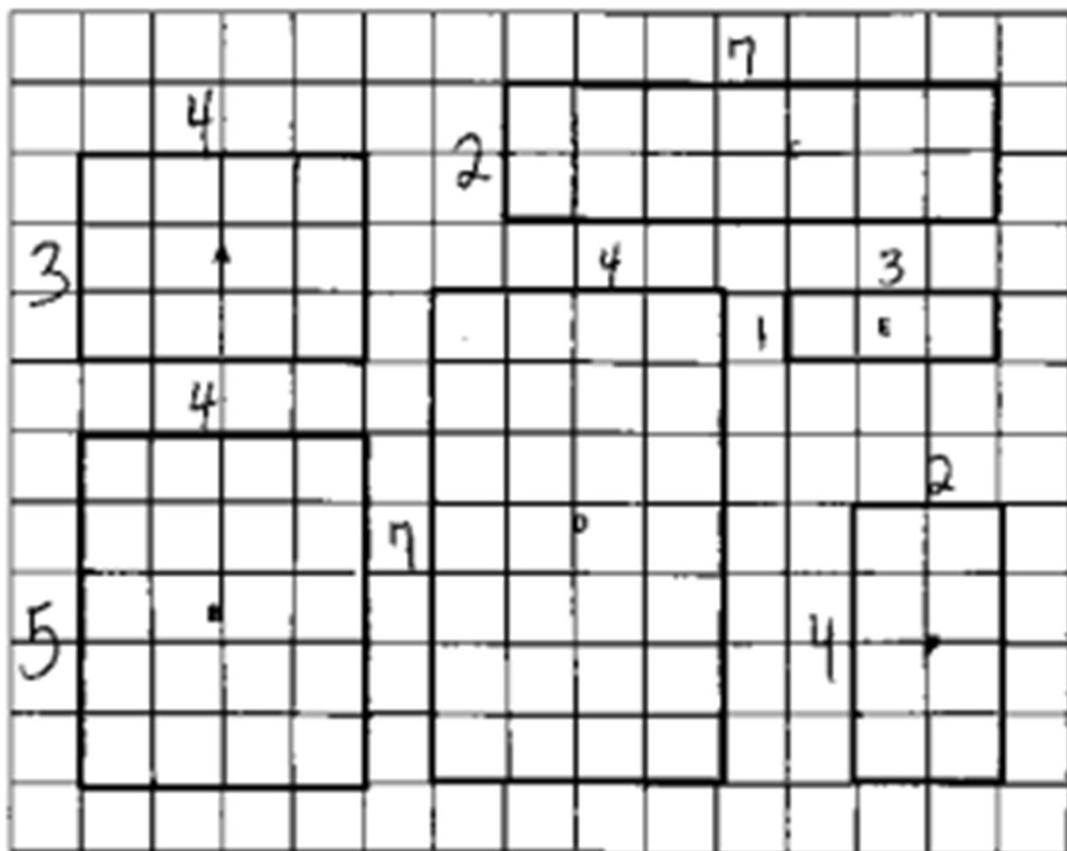

D. Area: $\underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$ square units

E. Area: $\underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$ square units

F. Area: $\underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$ square units

Area Worksheets (Rectangles)

1. Use a straight edge to draw a grid of equal sized squares within the rectangle. Find and label the side lengths. Then multiply the side lengths to find the area.

A) Area: $3 \times 4 = 12$ square units

B) Area: $5 \times 4 = 20$ square units

C) Area: $2 \times 7 = 14$ square units

D) Area: $4 \times 3 = 12$ square units

E) Area: $1 \times 6 = 6$ square units

F) Area: $4 \times 2 = 8$ square units
