Solve Literal Equations (Two-Step)

Solve the equation for y

$3y - x = 5$

Solve the equation for t

$g = 4t - 5$

Solve the equation for b

$w = 2b - 4$

Solve the equation for b

$k = -2b + 1$

Solve the equation for p

$m = -2p + 3$

Solve the equation for v

$r = \dfrac{5v}{2}$

Solve the equation for n

$2w = 2n + 3$

Solve the equation for p

$2p + 1 = h$

Solve Literal Equations (Two-Step)

Solve the equation for y

$3y - x = 5$

$y = \dfrac{5 + x}{3}$

Solve the equation for t

$g = 4t - 5$

$t = \dfrac{g + 5}{4}$

Solve the equation for b

$w = 2b - 4$

$b = \dfrac{w + 4}{2}$

Solve the equation for b

$k = -2b + 1$

$b = -\dfrac{k - 1}{2} = \dfrac{1 - k}{2}$

Solve the equation for p

$m = -2p + 3$

$p = -\dfrac{m - 3}{2} = \dfrac{3 - m}{2}$

Solve the equation for v

$r = \dfrac{5v}{2}$

$v = \dfrac{2r}{5}$

Solve the equation for n

$2w = 2n + 3$

$n = \dfrac{2w - 3}{2}$

Solve the equation for p

$2p + 1 = h$

$p = \dfrac{h - 1}{2}$
